DETAILED ACTION

Applicants arguments filed on 4th April 2007 with respect to claims 1-16 have been fully considered and are persuasive. Accordingly, the examiner has withdrawn the rejection of record.

Reasons Allowance

1. The following is the examiner's statement of reasons for allowance:

The applicants process for the single-stage preparation of polyoxyalkylene glycols, wherein the content of the organically bound nitrogen in the neopentyl glycol is less than 5 ppm is novel and unobvious because of the closest prior art (EP 1 361 243 A1) of the record does not teach or fairly suggest the content of organically bound nitrogen in the neopentyl glycol in the preparation process. Additionally, applicants' clearly showed and compared the neopentyl glycols containing less than 5 ppm organically bound nitrogen with that of the commercially obtained neopentyl glycol, which contains 15 ppm organically bound nitrogen, in the Example 1 with Comparative example 2 of the specification. The results clearly show that the use of neopentyl glycols containing less than 5 ppm organically bound nitrogen strongly increases the catalytic activity of the heteropolyacid (insignificant deactivation), whereas with the commercial neopentyl glycol, which contains 15 ppm organically bound nitrogen, the catalyst suffers severe deactivation. Claims 1-16 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
